Professional Summary

Final-year Computer Science and Information Technology student focused on full-stack development and applied AI engineering. Experience building web applications and REST APIs with JavaScript, React, Node.js, Express, and MongoDB. Completed learning in Generative AI and system design, with project work spanning token optimization, chat applications, and developer tooling. Seeking entry-level Software Engineer, Full-Stack Developer, Backend Engineer, or Junior AI Engineer roles.

Technical Skills

Languages: Java, JavaScript, C++, SQL
Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, WebSockets, Socket.IO, JWT
Databases: MongoDB, PostgreSQL, MySQL, Prisma
AI / Tools: LLM application development, tokenization, MCP (Model Context Protocol), Git, GitHub, Docker, Postman, VS Code

Experience

Web Developer Intern — Hisab OK **Jan 2026 – Feb 2026**
Web Development

- Developed React application features and used Redux for client-side state management.
- Integrated frontend workflows with REST APIs built using Node.js, Express.js, and MongoDB in collaboration with backend engineers.
- Used GitHub collaboration and code review workflows to manage changes and support team development.

Web Development Engineer Intern — IBM Developer Skills Network (FSP Program) Feb 2026 – Mar 2026
Backend / API Development

- Built RESTful backend endpoints with Node.js and MongoDB Atlas; implemented stateless JWT authentication for protected API access.
- Improved database access patterns; the original resume reports 40% fewer database calls and 30% better API efficiency. Keep these figures only if you can substantiate the measurements and your contribution.

Selected Projects

Token Optimization Platform *Next.js, TypeScript, Prisma, tokenization*

- Built a web app to analyze text and optimize LLM prompt tokens, with API routes for document analysis and optimization.
- Implemented tokenization utilities and database access through Prisma. Repository

Chatty Build — Chat Application *JavaScript, Node.js*

- Developed a chat-focused application with backend logic in a dedicated server entry point. Repository

Roamio — Hotel Booking Web Application *React, Node.js, Express.js, MongoDB, Mongoose*

- Developed a hotel-listing application with REST routes and database operations using MongoDB and Mongoose.
- Implemented listing-data workflows; describe authentication only if it is present in the final implementation.

AutoWiki — AI Codebase Documentation *Node.js, Inngest, LangChain, Pinecone*

- Worked on a repository-processing workflow that chunks source content and stores document vectors for retrieval-oriented codebase documentation.
- Integrated event-driven job processing and vector storage; add the repository URL and measured results after confirming the final implementation.

Education

Dronacharya Group of Institutions **July 2023 – July 2027**
B.Tech, Computer Science and Information Technology (CSIT) *Greater Noida, Uttar Pradesh*
Reported aggregate: 67% through Semester 5. Coursework: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks.

Learning & Certifications

- Completed ChaiCode Generative AI cohort: LLM applications, AI system design, vectorless indexing, agentic workflows, SDKs, and memory layers.
- Completed system design learning covering distributed-system fundamentals and scalable architecture concepts.
- Apna College: 50+ hours of DSA and full-stack development learning; Cisco cybersecurity modules; Accenture Software Engineering Job Simulation; AWS Summit India Online attendee.
